

September 02, 2020 - Manli Technology Group Limited is proud to announce the upcoming launch of the Manli GeForce RTX™ 30 Series GPUs based on the NVIDIA Ampere architecture. Building upon RTX, the second-generation of GPUs will feature new RT Cores, Tensor Cores, and streaming multiprocessors. The 30 Series will be able to take the gaming and graphic experience to the next level.

### **Performance Leap**

The new Ampere architecture redefines performance. NVIDIA Ampere architecture will deliver increases of up to 1.9X performance-per-watt over the previous generation GPUs. The new RT and Tensor Cores have twice the throughput. This enables all sorts of AI features, such as NVIDIA DLSS which boosts FPS without sacrificing image quality. NVIDIA Reflex minimizes latency for maximum responsiveness. These technologies also extend beyond gaming and into the creative field to power all sorts of projects.

### **Manli Design**

The triple fan front plate features clean lines with subtle accents. The aluminum back plate lends structural rigidity to the 3-slot GPU. AI capabilities will be greatly empowered by the onboard technology, and this inspired the packaging design. The front features a colorful explosion of branching connections representing the unlocked potential the new GPUs provides.

### **Availability**

The Manli GeForce RTX™ 3090 and 3080 are planned to launch in late September, 2020. The Manli GeForce RTX™ 3070 is expected to follow close behind in early October.

## **About Manli Technology Group Limited**

Established in 1996, Manli Technology Group Ltd. has been a major manufacturer and supplier of Computer Graphics Cards, Mining Systems, Mining Cards, and other peripherals/components. Manli has been able to fulfill various needs in the continuously changing IT industry. With an innovative R&D team and strict quality control standards, Manli's products always mean performance, reliability, and conformance. Our goal is to provide high-performance products at competitive prices.
